

Job Title:

Senior Software Engineer – Financial Management (Technology) (Petaling Jaya)

Location:

KPMG PJ Office

Job Type:

Full-time

About the Department:

The Financial Management (FM) practice is a part of KPMG Management Consulting. We focus on enhancing the effectiveness and efficiency of the finance function and the value it delivers to the business. Joining the Financial Management team offers an unparalleled opportunity to engage in target operating model design and implementation, finance transformation, enterprise performance management, process improvement, and change management. Our business-focused approach ensures that our solutions are tailored to address client issues effectively.

The FM-Technology Team delivers innovative technology solutions that support both KPMG's internal digital initiatives and our clients' digital transformation journeys through custom software development, automation, data analytics, and AI-driven solutions.

About the Role:

We are seeking a motivated and experienced Senior Software Engineer to join our FM-Technology Team. In this role, you will design, develop, and maintain enterprise digital solutions that support both KPMG's internal initiatives and technology engagements for our clients.

Working closely with consultants, project leads, business stakeholders, clients, and vendors, you will contribute throughout the software development lifecycle—from requirements analysis and solution design to implementation, testing, deployment, and support. As a senior member of the team, you will also mentor junior software engineers, promote software engineering best practices, and help deliver high-quality, scalable, and reliable solutions.

Key Responsibilities:

- 1 Design, develop, test, deploy, and maintain web applications and digital solutions for KPMG and client engagements.
- 2 Collaborate with consultants, project leads, business stakeholders, clients, and vendors to understand business requirements and deliver effective technical solutions.
- 3 Participate in solution design discussions and recommend appropriate technologies and implementation approaches.
- 4 Provide technical guidance and mentorship to junior software engineers through code reviews, knowledge sharing, and day-to-day support.
- 5 Troubleshoot and resolve technical issues while ensuring application performance, security, and reliability.
- 6 Develop and integrate APIs, databases, and third-party systems where required.
- 7 Promote software engineering best practices, including coding standards, documentation, testing, and version control.
- 8 Contribute to project planning, technical estimation, and continuous improvement initiatives.
- 9 Support the development of automation, AI, and data-driven solutions to enhance business processes for KPMG and clients.
- 10 Stay updated with emerging technologies and recommend innovative approaches to improve solution delivery.

Requirements:

- 1 Bachelor's Degree in Computer Science, Software Engineering, Information Technology, or a related discipline.
- 2 **2–4 years of professional experience in software development.**
- 3 Experience developing enterprise web applications using HTML, CSS, JavaScript, jQuery, and modern frontend frameworks such as Vue.js or React.js.
- 4 Experience with backend development using Python (Django), C# (ASP.NET), or similar frameworks.
- 5 Experience with relational databases such as MSSQL, PostgreSQL, or MySQL.
- 6 Good understanding of RESTful APIs and system integration.
- 7 Experience using Git and collaborative software development workflows.
- 8 Ability to mentor and support junior software engineers.
- 9 Strong analytical, problem-solving, and debugging skills.
- 10 Good communication and interpersonal skills with the ability to collaborate effectively with technical and non-technical stakeholders.
- 11 Self-motivated, proactive, and willing to continuously learn new technologies.

Preferred Qualities:

- 1 Experience delivering software solutions for external clients or consulting projects.
- 2 Familiarity with Microsoft Azure or other cloud platforms.
- 3 Experience with CI/CD pipelines and DevOps practices.
- 4 Familiarity with Docker or containerized deployments.
- 5 Familiarity with Power BI, UiPath, or Microsoft Power Automate.
- 6 Experience working in Agile or Scrum environments.
